

When compiling EMC2 part of the RTAI headers includes `asm/asm-offsets.h` and this file is not found. In reality, there is a sym link, the `asm` directory, that was a dead link to `asm-x86_64` which in the new kernel `x86_64` was renamed to just `x86`.

```
cd /usr/src/linux-headers-2.6.24.x-realtime/include ls -l -- confirm asm is a dead link
sudo rm asm ln -s asm_x86 asm
```
